Patent No. 641659
GENERAL INFORMATION:
APPLICANT: Giulano, Kenneth A.
TITLE OF INVENTION: A System for Cell Based Screening
TITLE OF INVENTION: A System for Cell Based Screening
TITLE OF INVENTION: A System for Cell Based Screening
CURRENT APPLICANION NUMBER: US/09/513,783A
CURRENT FILING DATE: 2000-02-25
NUMBER CF SEQ ID NOS: 180
SOFTWARE: Patentin Ver. 2.0
SEQ ID NC 46
LENGTH: 239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ; FATCHIC NO. 0102101.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diphosphate + L-leucyl-tRNA(Leu).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                  STRAIN-Ed / KW20 / ATCC 51907;

Aminoacy1-tRNA synthetase; Protein biosynthesis; Ligase; ATP-binding;
                             diphosphare + L-leucyl-tRNA(Leu).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Complete genome sequence of Salmonella enterica serovar Typhimurium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-6CT-2003 (Rel. 42, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57; Gaps
                                                                                                                                                                                                                           J. Bacteriol. 185:1018-1026 (2003).
-!- CATALYTIC ACTIVITY: ATP + L-leucine + tRNA (Leu) = AMP +
diphosphate + L-leucyl-tRNA (Leu).
-! GYBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-OCT-2003 (Rel. 42, Created)

J. Biol. Chem. 273:26026-26035(1998).

-!- FUNCTION: Interacts with the cytoplasmic domain of the autophosphosphorylated insulin receptor which is then inhibited. The interaction is mediated by the SH2 domain.

-!- SUBGNIT: Binds to the anywrin repeat region of TNKL via its N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                 terminus (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and endosomes (By similarity).
-!- PTM: Phosphorylated on serine residues (By similarity).
-!- SIMILARITY: Contains 1 PH domain.
-!- SIMILARITY: Contains 1 Ras-associating domain.
-!- SIMILARITY: Contains 1 Ras-associating domain.
-!- SIMILARITY: Contains 1 SH2 domain.
-!- SIMILARITY: Belongs to the GRB7/10/14 family.
Growth factor receptor-bound protein 14 (GRB14 adapter protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 'Match 7.0%; Score 88.5; DB 1; Length 538; Local Similarity 19.4%; Pred.                                                                                                                                                                                                                                                                                                        Nat. Biotechnol. 20:1118-1123 (2002).
-!- CATALYTIC ACTIVITY: ATP + L.-leucine + tRNA(Leu) = AMP +
diphosphate + L.-leucyl-tRNA(Leu).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
